

# AnexSECURE

Sensible Surveillance Solutions

## ADVANCED INTEGRATED SECURITY AND **SURVEILLANCE** SOLUTIONS

# About AnexSECURE

AnexSECURE is a system integration company with a particular focus on providing highly innovative, reliable and cost-effective solutions for a wide range of Security requirements with a competitive edge.

AnexSECURE consistently delivers quality services with state-of-the-art technology and to its credit has on board a professional installation team with hands on experience on all its system and products.

AnexSECURE has expertise in designing solution architectures to meet specific requirements of the market. AnexSECURE provides mission critical solutions for companies from their core domain areas that include CCTV Surveillance Solutions, Access control time attendance, fire alarm system, integrated management software solutions, remote monitoring and managing with Secure VPN Connection.

The company specializes in meticulous execution of projects that also include structured cabling, integration of system and devices and network security

AnexSECURE has state-of-the-art RMA centres and proof of concept labs include a skill set of highly motivated professionals who are capable of handling the turnkey projects adhering to strict timelines and cost effective budgets.

## Why AnexSECURE?

- Highly efficient Security and Surveillance System Integration solutions
- Highly Innovative, Advanced Technology Feature Rich Security Solutions
- State of the art technology integration for advanced security and surveillance solutions.
- Comprehensively Customized and scalable solutions keeping in mind, the future growth of the organisation
- Technically adept installation team and direct contact support team to save valuable time in reaching the right person for the right job.

## The Team

**Rahul Gupta**  
Managing Director

**Hitesh Dharamdasani**  
Director - Technology

**Rajagopal MN**  
Consultant  
- Product Development

**Sandeep Shetty**  
Dy. General Manager

## AnexSECURE Wall

## Existing Problems

- We come across multiple cases of Internal theft and property damage from organisations that manage public valuables
- It is difficult to manage large spaces with off the rack surveillance systems and keep a track of these systems
- Managing and Monitoring existing security and surveillance systems due to inadequacy or constraints in the technology offerings of the systems
- The monitoring of a large fleet of cameras can be done locally but difficult to manage from remote locations.
- If the security systems are done at remote locations, it is difficult to ascertain the health and operability of a fleet of cameras.
- Remote viewing done over open internet or open cloud, which makes the entire system vulnerable to prying eyes.

## Our Solutions

### CCTV Surveillance Solutions and Monitoring

Extensive coverage of your entire space by IP Based High Definition CCTV Cameras, so every nook and corner is covered

### Remote Monitoring and Control.

You can control the entire security infrastructure, sitting at any remote location, over a Secure VPN Connection, keeping all your data secure. You can also control PTZ cameras over this connection

### Online Health Checkup

Your Entire Surveillance system is constantly monitored over a cloud and in case, there is failure, our systems immediately send you alerts over SMS and E-mail, keeping you ahead of your security systems

### Secure Remote Monitoring and Viewing

For all your Surveillance Systems, you can have a remote viewing capability for Authorized personnel from any corner in the world, over a Secure VPN Communication.

### Emergency Alert Systems

We create an intrinsic line of systems that work in coordination with each other to detect and alert emergency services like, fire emergency, intrusion detection, motion detection etc.

### Custom Made Scalable Surveillance Solutions

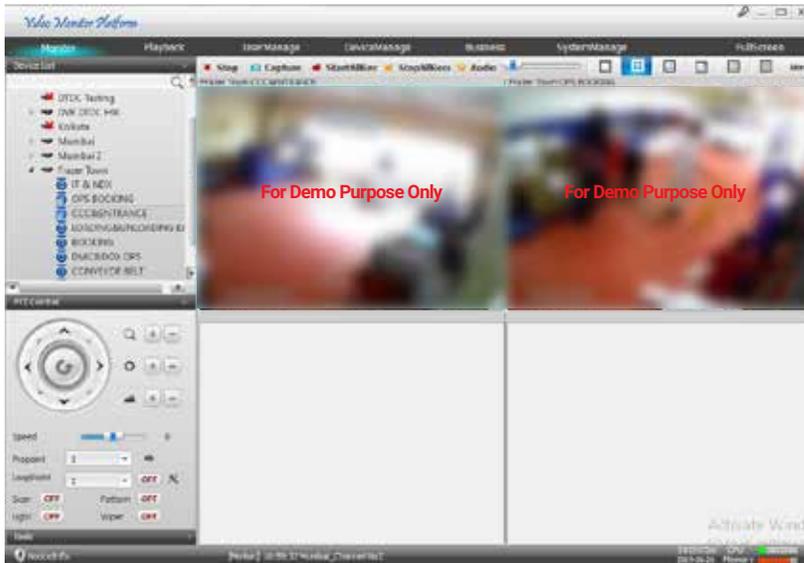

All our solutions are completely customised based on your requirement and your work environment, which makes it highly efficient and adaptive to your environment. This also helps us scale the same solution as your company grows.

### PAN INDIA SUPPORT TEAM.

It is difficult for one player to provide reliable support throughout India.

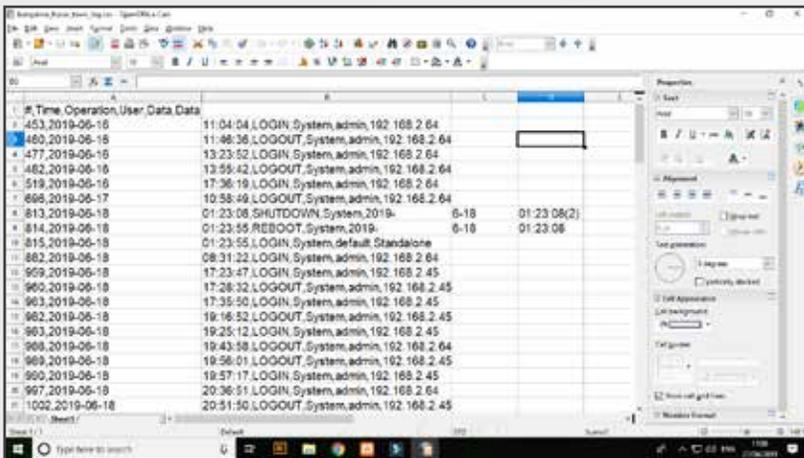

AnexSECURE had a team of skilled and experienced support engineers located strategically throughout the country. We also have a strong relationship with channel partners throughout the country. Most of our solutions can also be managed by remote access, which makes us one of the very few brands in the Indian Market to have a PAN INDIA presence for support.

# Secure Remote Viewing and Online Health Checkup

You can securely check the health and status of your entire Surveillance system sitting in any corner of the world. All the streaming is done securely over a Secure VPN communication to prevent any unauthorized access. The feed can be accessed by authorized personnel only. It notifies the authorized personnel over SMS and Email alerts in case of downtime.

## Email Alerts

Hello,

Location Bangalore (Frazer Town) DVR is now Unreachable

##This email has been automatically generated by the your appliance

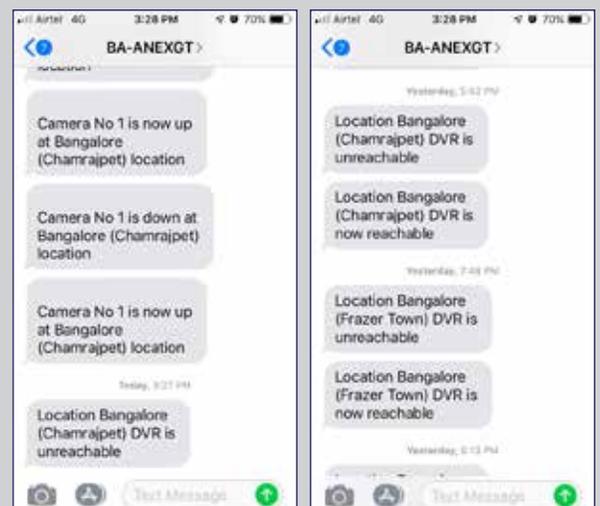

##For more information contact Anex-GATE support at

[support@anexcare.com](mailto:support@anexcare.com)

## Highlights

- All the data will be available in all authorized systems - All camera locations, all recordings and all relevant data for authorized access only
- Authorized access will be given for only dedicated personnel
- Online Health Check will help monitor and check the connectivity of each location's camera, DVR/NVR and HDD status.
- For any connectivity issue from the any of the location, there will be live alerts (SMS and Email) that will be sent to the authorized person
- Scalable Solution - As your business grows, you do save valuable capitals by not investing in expensive equipment.
- Customised reports will be automatically generated and sent to the Authorized Personnel.

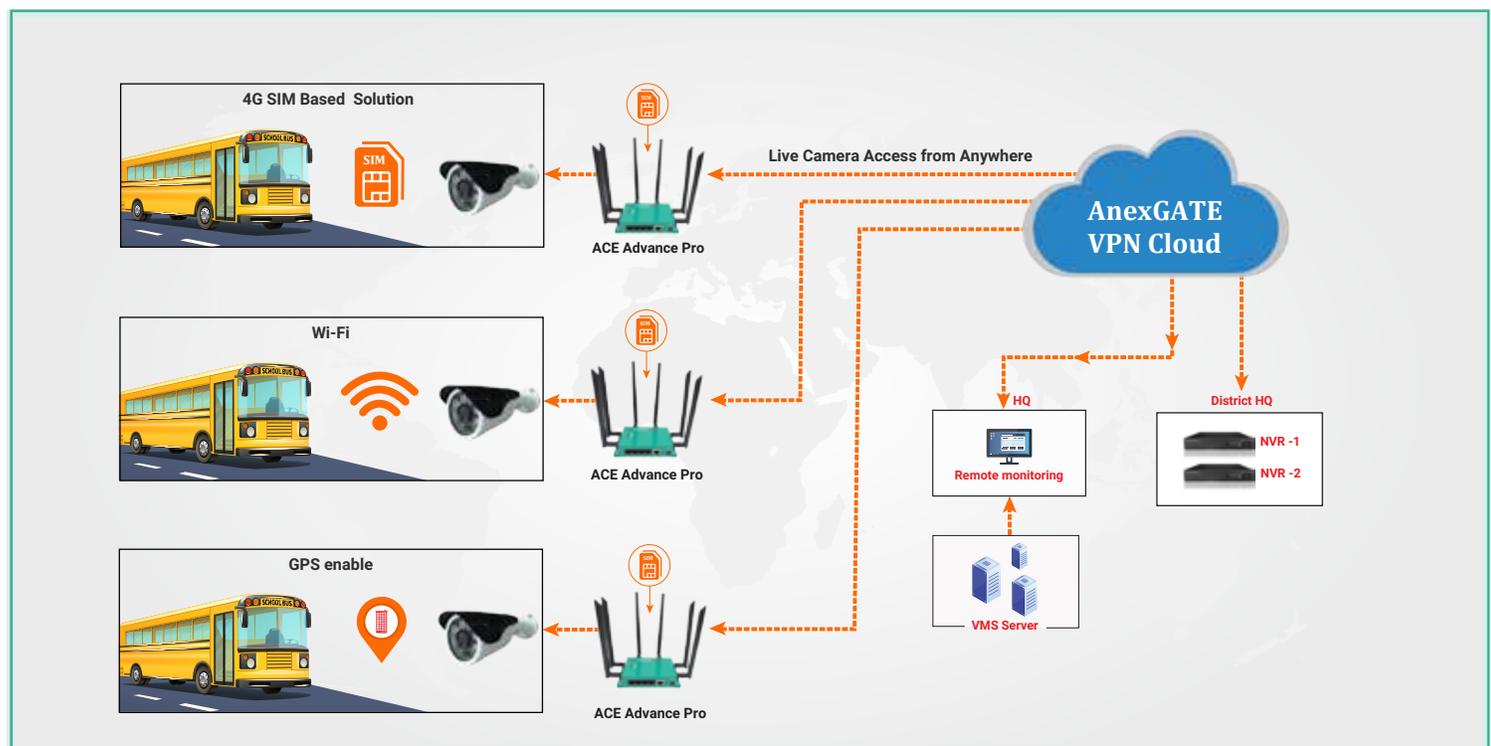

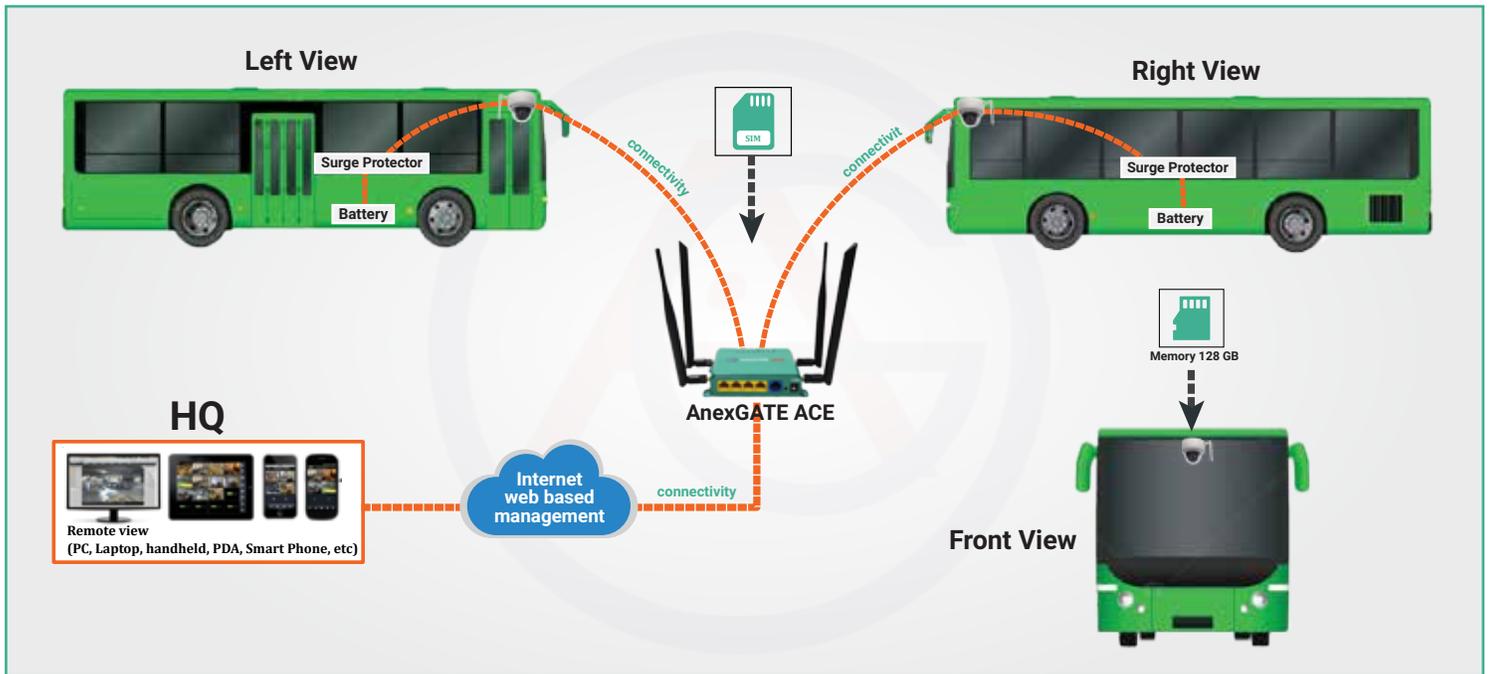

## Text Alerts

(Note: For Remote Locations with uncertain connectivity, the streaming can be done over Dual Sim with Failover)

# Surveillance Solution For Moving Vehicles

- This is an innovative solution for institutions that need to monitor a large fleet of moving vehicles for security and surveillance purposes.
- The cameras are backed with surge protectors from the battery of the vehicle and a high storage capacity of up to 256GB.
- The feed from these cameras can be directly transmitted to any remote location to multiple authorized appliances over a Secure VPN Channel.
- The feed from multiple cameras can be integrated into one system to be monitored from any remote location by authorized personnel.
- This solution can be customised for any industrial vertical to suit your demand.

# CASE SOLUTION

We create secure and efficient solutions for various industry verticals by integrating the surveillance systems with a secure connection transmitting all the data over a secure VPN line. This helps companies minimise on their capital investments for both surveillance and network security, yet get a global quality of surveillance equipment integrated with network security equipment.

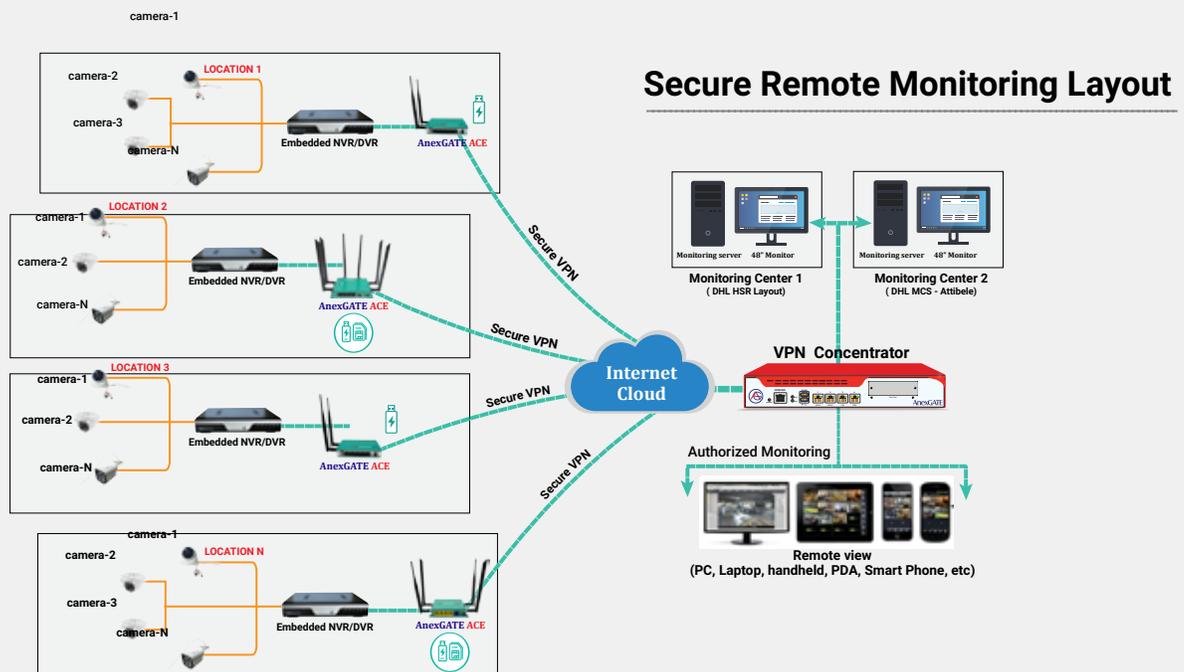

## Customer Challenges

The logistics industry was looking for a reliable solution to monitor all entry and exit of shipments, prevent fire accidents and eliminate all damages due to internal theft or mishandling on packages.

On the same lines, it was also looking for sure monitoring for its multiple locations, including the safety of its workforce and all emergency services and alerts in place.

## Challenges Summary

- Increased Leakage Costs
- Decreasing Productivity
- Increased Internal theft and damages
- Entry and Exit Tracking of Vehicles
- Camera Control
- Fire Prevention and Alarm Systems

## AnexSECURE Solutions

We have extensive experience of providing integrated security solutions for Logistics and Warehousing companies. We analysed the entire perimeter and executed the solution step by step.

First, for Surveillance camera we create a POE Switch network so that the solution is safe, secure and scalable for any future expansion. This created a network of cameras that can be monitored from a remote location.

Second, we integrated Fire Alarm Systems, Biometric Access Control systems and an array of sensors in the network for central monitoring and control of the entire perimeter security.

To have a future scalable expansion, we also created a provision for Secure Remote Viewing and control of the entire surveillance system over ANEXGATE VPN appliances to allow only authorized people to have remote viewing, monitoring and control access.

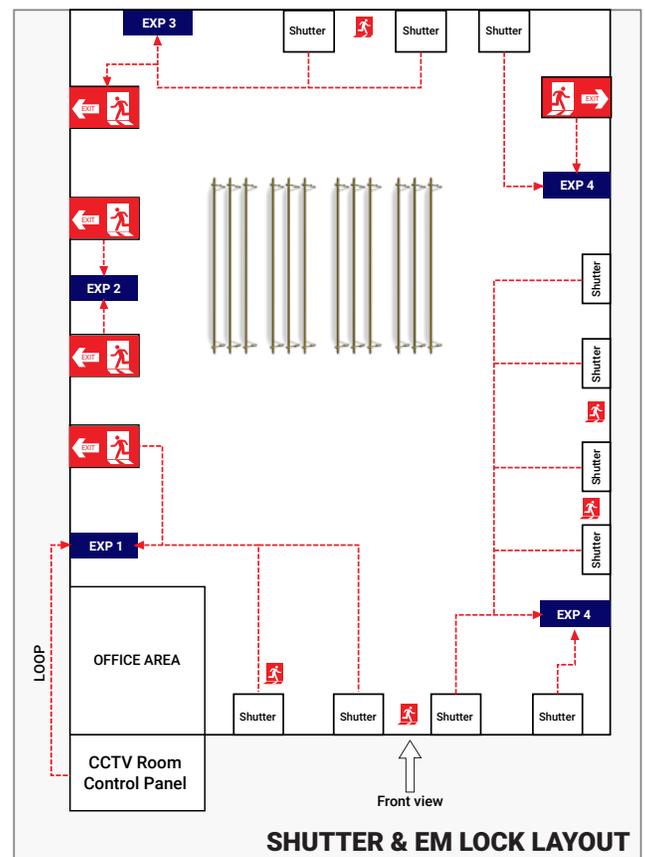

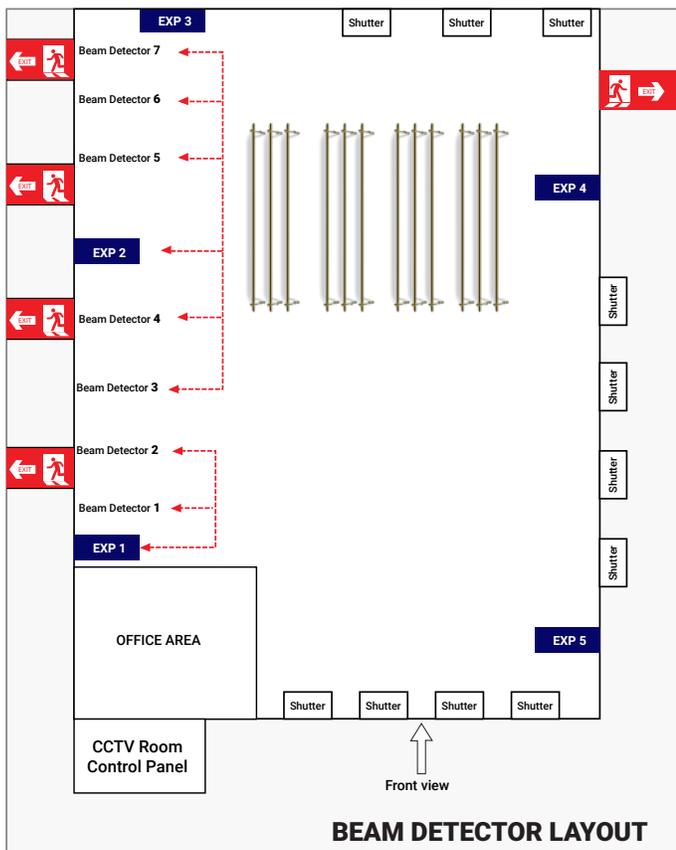

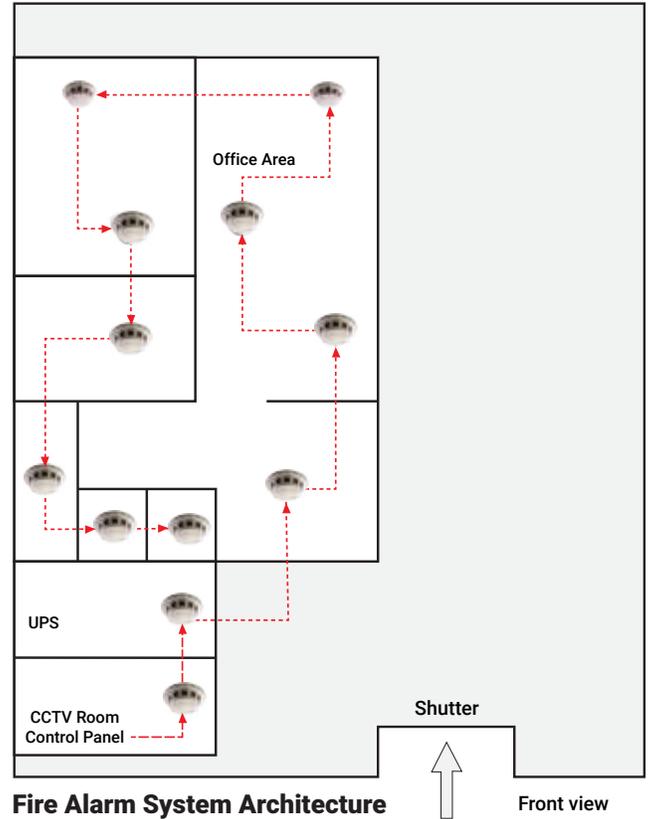

We have observed that, by enabling the access for remote viewing and monitoring, the productivity of the desired location can be improved by 20-25%. We have executed multiple such solutions for renowned names in the Indian Logistics and Warehousing Industry that include-Blue Dart, Ecom Express, DTDC, SPOTON, DHL and many more.

## Solutions Summary

- Implementation of integrated IP based solution
- involving Surveillance Camera and scalable
- POE switch based network
- Smoke detectors with control panel
- Sensors for emergency doors
- Biometric based Access control solution
- Beam sensors for alerting wrong movement of fork lift shafts

## Solutions Results

- Reduced maintenance costs
- Enhanced security system with sophisticated capabilities
- Power over Ethernet for redundancy
- Remote monitoring and management
- Highly Scalable and Economical
- Increased Productivity with Decreased Costs
- Night Vision Camera with High Range IR LEDs
- Damage Prevention
- Fire Prevention and Alerts
